The North-China Herald.

IMPARTIAL, NOT NEUTRAL.

SHANGHAI, SATURDAY, JUNE 17, 1865.

IT is matter for sincere congratulation that the French authorities have at length conceded the often mooted point of repressing gambling-houses. A marked diminution in crime became noticeable in the English and American settlements immediately after the closure of the gambling dens in those localities, and it was only natural that the frequenters of such establishments should take refuge on the French side, and carry with them all the elements of danger which their presence produces. When distributed evenly over the three settlements disturbances constantly sprang up which were often easily traced to the inmates and frequenters of the gambling-houses. How much this effect must have been enhanced when the whole body was transferred to the French settlement we leave our readers to judge. We do not know whether the French Municipal police sheet shewed a higher rate of crime after the closure of the gambling-houses on the North side of the Yang-king-pang, but it is certain that the quiet, orderly householders and shopkeepers who found themselves suddenly surrounded by native hells must have experienced the same uncomfortable sensations as are present to the dwellers on the first floor of a powder mill. It was to be regretted that the French Municipal Council did not act once act in concert with their colleagues on this side. They might reasonably have assumed that the French minister at Peking would never sanction the arrogation of a power to which the Treaty gives no claim, but would on the contrary bear out the Chinese in asserting their territorial rights. At the same time the public works which had been undertaken called for a large income to meet the anticipated expenditure, and that income had been estimated with a special eye to the amount derivable from licensing gambling houses. The extension of the bund, the building of a town hall, the construction and repair of bridges were undertaken on the supposition that a very large income would have flowed perennially from the places of low resort which filled the back slums of the settlement. On this ground we can readily understand the unwillingness displayed by the French to give up so promising and so necessary a source of revenue. Whether they were justified in balancing a question of local improvement against a question of morality may be left to the decision of casuists. But even then there were unmistakeable indications on the part of the Chinese of an intention to close the gambling-houses in the city and suburbs, and this should have deterred the framers of the budget from estimating their income at so high a figure. The lesson has now been taught with unmistakeable clearness that foreigners cannot assume jurisdiction over Chinese except by the sufference of the native authorities, and far less can they carry out any system with regard to native residents which flies directly in the face of enactments made by the local magistracy. We should have supposed that a compromise might have been effected—that were the French Council less determined to have the whole measure carried out or none, a system of rigid surveillance might have been instituted, which while diminishing the effects likely to spring from the existence of establishments of this nature would have obviated the necessity for the sweeping expulsion of all professional gamblers. For whatever restrictions are placed, the Chinese will gamble. If the hazard tables are destroyed, the votaries of gaming on a large scale will rush into the money market, and speculate frantically in exchange, while the more timid will find ways and means of satisfying their desires in private houses. The nation is a nation of gamblers, and an attempt utterly to eradicate gaming must of necessity prove a failure. All that we can expect to do is to diminish the evil consequences which flow from the universal practice of this vice, and this might be effected by a semi-prohibitive tax, by a limited number of licenses or, as we have suggested above, a strict system of surveillance. The mistake which is most frequently made by those who negociate either on a large or on a small scale with the Chinese is that no pains are taken to ascertain the true character of the people. It is not too much to say that by judicious representation almost any concession can be obtained, while an offensive attempt at compulsion stirs up the natural obstinacy of the Chinese character, and fans the embers of that contemptuous hostility towards foreign nations which has not yet been totally eradicated from the Chinese breast. The authorities require to be treated diplomatically, nor are they less open to judicious manœuvring than they are resolutely hardened against any direct assumption of power on the part of foreigners.

SUMMARY OF THE WEEK.

SINCE the date of our last Summary the weather has been fair, with two rainy days. The temperature has undergone little change. Few events of interest have taken place in the foreign settlements at Shanghai, and we are in receipt of no important advices from the river ports. Considerable dulness has prevailed in Shanghai during the week owing to the lack of public amusement of any description. A musical and theatrical entertainment, to be given by the band of the 67th Regiment, is, however, announced for this evening. Several celebrated vocal and instrumental pieces are included in the programme, and the performance will conclude with Selby's one-act farce, *The Unfinished Gentleman*. Every facility now exists for communication with Wusung. The carriage road has been completed, and to judge from the little effect heavy rain has had upon it, it would seem to be one of the best in the neighbourhood of Shanghai. On arriving at Wusung, every accommodation will be provided both for man and beast, at the Wusung Hotel, an establishment which, although long since established, has recently changed hands and is now supplied with everything essential to the comfort of visitors. A house-boat will ply up and down the river, in connection with the hotel, for the convenience of those who prefer water transit. The causes which came on for trial before H.B.M.'s Consul during the week, were few and unimportant. We publish a report elsewhere. In another column will be found the minutes of the last meeting of the North China Branch of the Royal Asiatic Society, held on the 7th instant. An interesting paper entitled "Incidents connected with a journey to Cambodia which had for its object a commercial enterprise," was read by H. Noëtzli, Esq. On its conclusion Sir Harry Parkes resigned the Presidentship of the Society and took farewell of the members. A report by the Superintendent of Police which we publish in another column, sets forth the advantages which would be derived from a Volunteer Fire Brigade being instituted in Shanghai. We fully endorse Mr. Penfold's views upon the subject, and consider that the recent fire in the Maloo, and the great loss of property caused on that occasion by the want of a properly organised force to take an active part in subduing the flames, should act as an incentive to our gallant Volunteers to meet from among their own ranks this deficiency in our means of preservation from fire. On the 12th instant a daring robbery was committed on a native bank situated outside the East gate of Shanghai city. The thieves, some twenty in number, entered the house attired as foreigners, and proceeded to rummage the boxes. Meeting with resistance from those living on the premises, a conflict ensued, which resulted in several of the latter being severely wounded, and during the confusion which ensued, the burglars effected their escape. Two of them have, however, been caught and identified, and it is probable that through them the whole gang will be brought to justice. On the 8th instant, Tsêng Kuo-fan left for the Shantung province, Li Hung-chang was to have proceeded to Nanking on the 9th instant.

Recent native advices from PEKING are of an alarming nature. It is said that the Nien-fei have invaded the Chi-li province and now hold a strong position near Pooting-fu, a city situated at a distance of about one hundred miles from the capital. In anticipation of such an event, the Imperial authorities had previously given orders for reinforcements to be supplied from the Keangsu province. Accordingly the Sungkiang and Fung Wang-shan camps will in a few days be broken up, and the disciplined troops sent north. The steamers *Fenelon*, *Glengyle*, *Viola* and *Fusiyama* have been chartered to convey them to Tientsin, at the rate of $5.50 per head. It is rumoured that Li Hung-chang has memorialised the throne to obtain permission to take supreme command of the Imperialist forces in the Northern provinces, and leave Tsêng Kuo-fan to fill the post of Governor General of the two Kiang. Taking into consideration Li Hung-chang's warlike renown it is thought probable that the government will agree to this arrangement. Meanwhile the formal exchange of seals between Tsêng and Li was to have taken place on the 5th instant.

Native advices from HANKOW are to the effect that five more of General Pao Chao's camps have mutinied, and thus leave a balance of two still faithful to the Imperialist cause, out of fourteen which Pao nominally commands. The seceders have set out on a foraging expedition into the Anhuei province.

Our NAGASAKI correspondent gives us further particulars as to the loss of the *Satsuma*. She struck at a distance of twelve miles from Nagasaki harbor, the weather being very foggy at the time. A court of enquiry was to have been held on the 8th instant. The Captain has been entirely absolved from blame in the matter. Forty packages out of about one hundred which composed the cargo, were saved, and the wreck was subsequently sold for $1,350. At the date of our correspondent's letter, ditaloes were at 200 per $100, and dollars still scarce. The American brig *Star* has been bought by Prince Kuga for $12,500. The *Satsuma* was to have been sold to the Prince of Satsuma for 23,000. The Queen's birthday was enthusiastically celebrated, and give rise to universal jollification. Under date of 13th instant we learn that considerable excitement was caused by a Yakonin "running a-muck" through the settlement sword in hand and assaulting every one whom he met. Five Chinese and a Mulatto were severely wounded by him. The perpetrator of the outrage has escaped, but rigorous enquiries are being prosecuted by the native authorities.

Our advices from HAKODADI reach to the 6th ultimo. The steamer *Sughalin* has departed for the Manchurian coast. The Russian corvette *Bogatyr*, the barque *Ouseri* and six whalers were to have left on the 7th May for Nagasaki. On the night of the 3rd instant, an English sailor from one of the whalers in port was killed by a Japanese in a drunken brawl. It is a cause for surprise that similar accidents do not take place oftener, as the sailors from the whaling vessel, when allowed on shore, indulge in the utmost excesses. The foreign authorities have taken the matter in hand, but had up to the date of our advices obtained no satisfaction from the native officials.

The English mail of April 26th arrived in the river on the 12th instant, bringing telegraphic intelligence from London to the 8th ultimo.

NORTH-CHINA BRANCH OF THE ROYAL ASIATIC SOCIETY.

THE thirteenth regular Meeting of the above Society was held in the Reading Room of the Shanghai Library, on Wednesday, the 7th instant.

Present.—Sir Harry S. Parkes, K.C.B., President, in the chair, G. F. Seward, Esq., Vice-President, Revds. C. H. Butcher and F. Mitchel, Doctors Lamprey, Robson and Johnston, Messrs. Thorne, Oppert, Alabaster, Markham, Gribble, Brown, Kidner, Kingsmill, Noëtzli, and others.

The minutes of the last meeting having been read and confirmed, and the Candidates on the list for membership duly elected, the following gentlemen were proposed for election at the next meeting.

As Resident members.

Proposed by Mr. BROWN, seconded by Dr. JOHNSTON.

C. Dillon, Esq.,
A. C. Dulcken, Esq.

Proposed by Rev. C. H. BUTCHER, seconded by Sir HARRY S. PARKES.

Rev. Moritz Kaufmann.

Proposed by Dr. JOHNSTON, seconded by Mr. KINGSMILL.

J. Sparrow Knight, Esq.

As non-Resident members.

Proposed by Sir HARRY S. PARKES, seconded by Mr. J. MCL. BROWN.

Dr. Falconer, Hankow.
Dr. Reid, "
Robt. Watmore, Esq., "
Ambrose Littledale, Esq., "

The President announced that Wu, ex-Taoutai of Shanghai, had kindly placed at the disposal of the Society the lower story of his house in the Ningpo Road, and that the Council hoped that they would be able to arrange to have the next meeting of the Society held there. The Council had also engaged the services of a clerk and curator, who would reside on the premises. He hoped that the members of the Society would assist in the contemplated work of forming a good museum and library.

A paper by Mr. Noëtzli, entitled "Incidents connected with a journey to Cambodia which had for its object a commercial enterprise," was then read.

It struck the writer, then at Singapore, that Kamput, a port of Cambodia doing a considerable trade with Singapore, and where no European merchant had yet settled, offered inducements to start a foreign trade, and in the spring of 1859 he, with a companion, left Singapore in a schooner for that port. On landing they found Kamput, a small town of 5 to 6,000 inhabitants, built on a narrow river, the people mostly Chinese and refugees from Cochin China. They were well received by the king, who had come down to Kamput to witness the launch of a vessel built in European style, and who, like his neighbour at Siam, is not only friendly to foreigners but also the first trader in his own country. The adventurers, however, soon found that it was not possible to dispose of their goods at Kamput, the real trade of the place being conducted at Kau-kao, a seaport of Cochin China, about 10 miles South. The French at this time being engaged in war with that country no Europeans were allowed to visit the port which communicates directly with the river Mei-kong. Here the Chinese barter their goods for rice, liquid, indigo, salt, fish, horns and hides, cotton, cardamoms, gamboge and silk for the Indian market, which are carried in boats thence to Kamput to be exported to China and Singapore. After a dinner with the king, followed by a visit from His Majesty, Mr. Noëtzli and his companion travelled in buffalo-carts to U-dong, the Capital. Of the journey thither and the city itself Mr. Noëtzli gave an interesting description; here he was kindly received by the first Prince and remained some time. The time of the arrival of the king from Kamput being, however, doubtful, he left, and visited the French missionary station at Pinhnlie, the seat of a bishop, and after a stay of a few days went on to Pheunm Beng. Phenum Beng is situated at the spot where the Mei-kong and the outlet of the Ta-li-sap lake, after joining, again divide to enclose the delta of the Mei-kong, forming here a cross. It has thus direct water communications in four directions; one arm coming from the lake Ta-li-sap, connected with the Siamese province and town of Battam-bong; one (the Mei-kong) flowing from the mountains of Thibet through the South-west province of China and the Lao country; the third flowing through the province of Mi-tho, communicating with Saigon; and the fourth leading to Bassac, from which at Chandoc commences the canal spoken of before as connected with Cau-cao. Thus situated Phenum Beng is the most important station in Cambodia and the emporium for foreign and native goods; the population is probably from 20,000 to 30,000, and the river is so wide that the opposite shore belonging to Cochin China is not visible. The inhabitants, ranged according to their respective numbers, are Cochin Chinese, Cambodians, Chinese and Malays; the principal merchants being Chinese. The natives here appear to be as much addicted to opium-smoking as the Chinese. The writer then gave a description of the currency, and exhibited a silver Tical lately coined by the king of Cambodia. The coin most in use is the Cochin Chinese cash, but others are current. The locality, in addition to the usual articles of commerce, produces abundance of sugar-cane and fruits and vegetables of excellent quality. From Phenum Beng the writer started for the Ta-li-sap lake, the river passing through dense jungle affording shelter for multitudes of birds and monkeys, but apparently uninhabited by man. The lake is situated between about 12° and 14° north latitude, and has probably a diameter of about 12 miles and a circumference of 400 miles. The shores are low and covered with thick forest and during the inundations are flooded; the water is shallow but is inhabited by countless shoals of fish. A large fishing village marked the entrance of the river flowing into the lake from Battam-bong in Siam, a description of which was given; here were found two Frenchmen lately returned from the gold mines. They stated that gold in abundance was to be had at a small distance from Battam-bong but that hitherto the unhealthiness of the Chinese had prevented the successful working of the mines, the water in the neighbourhood of which is moreover stated to be poisonous. Here a letter received caused Mr. Noëtzli's immediate return and he decided on the overland route to Bangkok as the quickest; after many disagrémens and some dangers surmounted, added to the impossibility of procuring proper food, he arrived in the middle of August at Bangkok.

The President having made a few remarks on Cambodia, its ancient greatness and present poverty, its mineral wealth and fertility, its one port, and one inland town, after a reference to the history of Poland as offering more than one point of resemblance; passed a deserved compliment on Mr. Noëtzli, for his energy in endeavouring to open a country so little known, and his courage in alone undertaking the overland journey from Battam-bong to Bangkok.

A vote of thanks to Mr. Noëtzli was then passed unanimously.

The President having announced to the meeting his approaching departure from Shanghai,

It was proposed by Dr. Johnston,

"That this meeting, while congratulating the President of this Society, Sir Harry S. Parkes, on his recent appointment as British Minister in Japan, cannot but look with regret on his approaching departure, which will deprive the Society of his services as President which he has discharged so ably and energetically since its resuscitation."

He hoped that the President would still continue in Japan to take the same interest in the Society which he has always exhibited here, and added that to him the Society was mainly indebted for its present satisfactory position.

The motion having been seconded by the Rev. C. H. Butcher, was carried unanimously.

The President then made a few remarks on the present position of the Society and its future prospects. It now contains upwards of one hundred and fifty members; up to this time there had always been a supply of papers for the monthly meetings, some of which were very valuable, and he had every reason to expect that for the present at least, there would be no shortcomings. He had been promised some extremely interesting papers and he hoped that the work so well begun would under his successor be ably carried out. With thanks to the meeting for their kind appreciation of his services, he thought that to the successive secretaries of the Society, Messrs. Jamieson and Brown, much of their present prosperity was due. He then in a few words took leave of the meeting.

The meeting then adjourned.

MUNICIPAL COUNCIL REPORTS.

COPY OF REPORT OF THE SUPERINTENDENT OF POLICE, *alluded to in the Report of the Watch Committee.*

POLICE OFFICE, *June 5th*, 1865.

SIR,—As the number of Foreign Police available for fire (50) are now so few as to make it impossible for them to take charge of the Fire Engines and keep them at work, protect property, keep a clear space, assist in pulling down houses to arrest the progress of fire, &c.,—and as a number of Foreign residents invariably attend at fires, willing to give any assistance, but at present each one acts as he think best, the result being a great destruction of property which would probably be saved did the whole act in concert—were a Fire Brigade established it would be to the great advantage of owners of property in the Settlements.

A Volunteer Fire Brigade might be established, requiring but little time from the members who would be required to know how to put into working order all the Engines in the Settlement. This might be learned in one short lesson.

All the Engines should be placed under the orders of the Brigade:—

Reproduced with permission of the copyright owner. Further reproduction prohibited without permission.

That the pulling down of houses to arrest the progress of the fire should be done only under the direction of the Brigade:—

That at the breaking out of a fire, the members be called by the Police as far as practicable:—

That ropes, hooks, axes, and any articles considered necessary, be procured for pulling down houses, &c.

As it is difficult to procure water even close to the river at low tide, I would recommend that one of the Engines be placed on a boat and kept afloat. This might be rowed to any point, and, provided hose were procured, could force water from one to two thousand feet in any direction, and thus [illegible] other Engines.

That on the Brigade proceeding to a fire they should fall in at some point (say the nearest Engines), until told off to some point or duty.

C. Penfold,
Superintendent M. P.

R. F. Gould, Esq.

H. B. M. CONSULAR COURT.

Before Sir Harry S. Parkes, K.C.B.

H.B.M.Consul.

S. Brenell, Esq. } *Assessors.*
C. Colnett, Esq. }

Shanghai, June 13th 1865.

Limby *versus* Blum Bros.

The plaint in this case was to the following effect—That on the 22nd of July, 1861, it was agreed between the plaintiff and defendants that the latter should sell and deliver to the plaintiff 692 bales of cut seaweed, weighing 440 piculs, upon the terms that the seaweed should be in good order and condition and should be paid for at the price of Tls. 2,750 for the entire invoice, at ninety days prompt, with corresponding interest. And the plaintiff has paid this price for the seaweed, and all the conditions were fulfilled by the plaintiff. Yet the defendants delivered to him a much smaller quantity, namely 632 bales, in bad order and condition and short in weight. Whereby the plaintiff lost the price paid by him for the seaweed and the profits which he would have derived from the performance of the agreement by the defendants.

The defendants made a general denial of the agreement in the manner and form alleged in the plaint, and of all allegations in the plaint, in respect thereof. As to the money counts. Except as to the sum of Tls. 246.76, the value of 62 bales of seaweed short delivered, as referred to in the plaint, the defendant stated that he never was indebted as alleged. As to the above-mentioned sum of Tls. 246.76, payment thereof would be made into Court.

Mr. Mybrugh said the whole case was so simple that he would make but few remarks. The action was brought by Mr. Limby on a contract made with Blum Bros. for the supply of 692 bales of seaweed, to be delivered by them in Hankow, in good order and condition. There were two breaches made by the defendants in the performance of this contract,—the seaweed was not in good order and condition, and was less in quantity than stipulated. The word "warranted" had not been used in the contract, but it was not necessary; it was implied.

Total seaweed was sold at a much lower rate than had been according to contract. Mr. Innes and Limby's agent at Hankow, had stated (amongst evidence formerly taken, that some of it was sold at Tls. 7 per picul, namely, that portion which was in good order and condition. The natural inference to be drawn was that had the balance been of the same quality it would have sold at the same rate, as it would be absurd to imagine that 440 piculs could have glutted the market. It was on account of its inferior quality that the balance of the seaweed was sold, part at Tls. 3.50 and part at Tls. 4, per picul.

H. J. Limby said:—I am a broker in Shanghai. In July last I instructed Messrs. Powell & Co. to purchase seaweed for me. This is a true copy of the contract (handed in). By the contract the seaweed was to have been delivered in Hankow to my agents there, Messrs. Innes & Co. They were instructed to take delivery by Messrs. Powell & Co. I was informed through Messrs. Powell & Co. as to the quality, weight and condition of the seaweed. I make my claim on account of the actual difference between the contract weight and that of the quantity delivered, and because of the difference between the price at which Mr. Innes sold the seaweed and the market price it would have realized had it been in sound condition. I sustained an actual loss of over Tls. 1,700.

To Mr. Eames:—I have had a year and a half's experience in seaweed. I think there are only about four qualities of cut seaweed.

To the Court:—There is a great difference between cut and long seaweed. The latter is much cheaper.

A. Espantosa said:—I was in July last a partner in the firm of Powell & Co. We negociated for the purchase of some seaweed from Messrs. Blum Bros., on the part of Mr. Limby. Previous to entering into the contract I had a conversation with Mr. Rosenthal on the subject of its quality. I had once before bought seaweed of good quality from Messrs. Blum Bros., on account of Mr. Limby. At the time I was purchasing the second lot Mr. Rosenthal assured me it was equal to if not better than the previous lot purchased. He informed me that this seaweed had been in Hankow for some time.

To Mr. Eames:—I am pretty familiar with the quality of seaweed. I know there are several different qualities of seaweed. It would be difficult for me to say whether the first lot bought from Blum Bros. was all of the same quality. I bought the second lot by muster. I don't know where the muster is. I did not take it away with me. I knew that the muster was of good quality. I know nothing about the seaweed that was shipped. I did not see it. I received my commission.

To the Court:—I did not mention quality in the contract, as I had seen a muster. I did not put anything about its being "according to muster." I was acting in good faith, and did not think there would be any difficulty about the matter.

The evidence of James Innes, Esq., taken before Sir Harry Parkes on the 5th ultimo, was then read. It ran as follows:—

James Innes said:—I am a partner in the firm of Innes & Co. of Hankow. I recollect in the months of July of last year taking delivery from Messrs. Oxford & Co. of a quantity of seaweed on account of H. J. Limby. This is a memo of the weights and charges. I informed Messrs. Powell & Co. in writing, of the deficiency—the quantity short delivered, 102 pic. 14 cat. 4 lbs. I was advised that I should have received 692 bales weighing 440 piculs, the amount stated in the contract. (Contract handed in for information of Court.) As far as we could examine in the godown or cellar it appeared in good order and condition. This examination was made in Messrs. Olyphant & Co.'s godown, and was a superficial examination. I sent a native to examine it and he returned and said "can pass." Messrs. Oxford & Co. stored it in Messrs. Olyphant & Co.'s godowns. On delivery to me of the seaweed and removal to my own godown a re-examination or a closer examination took place. I then found that some of it was in very good order while other portions were badly heated, and in disposing of it, the portion in good order was sold at seven taels per picul, and the heated portion some at 4 taels and some at 3 taels 5 mace. I am acquainted with the market prices of seaweed that time. The same seaweed that I sold at 4 taels and 3 taels 5 mace had it been in good order and condition would have sold at 5 taels 5 mace. At 4 taels I sold 195 bales weighing 44 pcls. 23c., at 3½ Tls. I sold 330 bales weighing 213 pcls. 35c. At that time I certified the particular value of the seaweed that I sold at 4 Tls. and 3 Tls. 5 mace. This is the certificate signed at the time and which I swear to now. I have had great experience in selling seaweed. The market value of all articles is given us by our Chinamen, and I am sure that the above values are those which were given us.

Cross-examined:—My principals were Powell & Co. They informed me that they were acting for Mr. H. J. Limby. To the best of my recollection I was directed to take delivery of the seaweed if it were in merchantable order, and I considered it in merchantable order. At the time I took delivery, I considered that it was in good order and condition, or I would not have removed it from Oxford & Co.'s godowns, but I had not minutely examined it. I acted upon the information of one of my Chinamen, which is the usual mode of business. I had no specific orders, simply a general order to do the best. I don't know the circumstances of the purchase, as my letter of the 10th August will show; I think it was a few hours after the receipt of the seaweed into my godown that I found it was heated, "sweated" as we call it. At that time of the year seaweed may heat, I was going to say in six weeks, but that would depend on the seaweed as well as on the godown, the ventilation, &c. This heating was not discovered until after delivery had been taken, very shortly after, 2 or 3 days perhaps, certainly not more. No survey was held. I sold it within a month. I received instructions from Messrs. Powell & Co. to return the seaweed. I don't think there was time for me to receive instructions, Messrs. Powell & Co. being at Shanghai. I made no effort to return it because I did not know the nature of the contract made with Mr. Limby. It is very probable that I told Mr. Maxwell, the agent of the Mercantile Bank at Hankow, that my comprador would sell the seaweed. The price of seaweed was falling at that time. It always does with hot weather. I had not seen the contract, which says, "to be delivered subject to good order and condition," but had I seen it I think I should have taken delivery. Messrs. Olyphant & Co. refused delivery until Messrs. Oxford & Co. had repaid the advances to the Bank. I recollect making the remark that I was surprised at their advancing upon such cargo, on account of its perishable nature.

I did not know whether the weight was guaranteed or not. It is natural for parcels of seaweed to contain various qualities. I have seen a large quantity of one quality, it depreciates by evaporation and by salt and sand being shaken out of it. Fifteen per cent is a fair average loss on seaweed brought as rapidly as possible from Hakodadi to Hankow. I have had experience of this article. The seaweed was weighed as I took delivery, weighed in and weighed out. The weights in delivery are those given in my letters of 10th August, 1864. When I took delivery Mr. Oxford told me they had sold 62 bales. It turned out 60 as I state in the above letter, which made 335 piculs odd that I received.

This closed the case for the plaintiffs.

A. Rosenthal said:—I remember the conversations which preceded the sale of the seaweed to Mr. Espantosa. I positively swear that no muster was shewn at the time of the contract being made. I procured musters, but this was after the contract had been entered into. I told Mr. Espantosa I had never seen the seaweed so could not describe it, but that he could receive musters in Hankow. I have had a great deal of experience in seaweed. (The witness then proceeded to give a minute description of different qualities of seaweed.) The demand for seaweed lessened considerably since the contract was made.

To Mr. Mybrugh:—If Mr. Limby had agreed to an arbitration I meant to leave the question of weight to the arbitrators. On the 10th August Mr. Limby came into my office with a letter purporting to be from Mr. Innes in Hankow, but in which nothing was mentioned about bad order or condition. I don't think I have ever sold seaweed in good order and condition for 3 Taels.

Mr. Eames thought the question to be decided was whether or not the cargo of seaweed was in good condition on its arrival at Hankow. All the other questions in the case had been satisfactorily disposed of. He would draw attention to the fact that the defendant expressly stated in the contract that he would not guarantee the weight of the seaweed. Seaweed being a damp substance would naturally lose considerably in weight, indeed it had been known to lose 20 per cent on a voyage from Hakodadi to Hankow. Mr. Innes had said that the seaweed was heated, but this it was very liable to become, and it might have been in perfect order when taken from the vessel, and subsequently become heated in the godown. If a hidden defect had been discovered by the plaintiffs they might have been entitled to claim for damage, but this was patent, and great carelessness was shown in the seaweed not having been minutely examined. He would suggest that the fall in the market may have caused the decrease in the price obtainable for the seaweed.

Mr. Mybrugh, in briefly summing up his case, quoted Chitty on contracts to prove that a vendee is entitled to claim from the vendor the difference between the market value of goods and the price at which they are re-sold.

The Moravians in the Himalayas.

(Friend of India.)

The traveller who, after making long and desolate marches where no European face is seen, passes the cairn near the Ross Khound which marks the extreme limit of India on the north, and after a few more marches comes upon the Mission settlement of the Moravian brethren at Kyelang, is apt to fancy that he has somehow reached "home," so thoroughly English and domestic is the scenery. Green fields of careful cultivation tastefully laid out, neat and substantial stone dwellings—the abodes of the farmers, and curious winding lanes bordered with shady lines of the cedar—the only tree that grows at that elevated situation, cover the entire area of the valley, but deal stillness reigns over the scene. There is no hum of bees, no "low of kine upon the lea," no sound or sight of bird; all is ever still and silent as the grave. The valley is situated far in the interior of the great Himalayas, here expanding north and westward into a series of snow-clad peaks towering far above the clouds, and beyond the snowy range so faintly descried from the Simla and Mussoorie hills as lining the northern horizon. Extending to some three miles it has been evidently reclaimed by the wear and tear of elemental forces in a period embracing many geological cycles, from the steep sloping ravine which here once descended, and which in most other parts still descends, into the rapid and dangerous Chundra. More then 10,000 feet above the level of the sea, the valley is surrounded and overtopped by everlasting snows and glaciers. It appears a green spot in a desolate howling wilderness, where the adventurous traveller, proceeding into Central Asia, recalls for the last time sweet memories of home, sees kindly European forms and faces, exchanges hearty pressures of the hand, and is greeted with Christian hospitality.

Let us winter the vale of Kyelang. We pass through the first portion of the village lying to the south, and divided from the more populous portion to the north by a branch ravine which cuts the valley into halves and descends to the Chundra. A thousand feet—and thousands of feet in this region are accounted nothing of—up above, we see a small white cross, which some convert tells us we are on Thibetan ground. The lanes become more intricate as our guide leads us to the "Padre Sahibs." We find that we are descending the slope of the valley, and at last, not far from where it falls suddenly a thousand feet into the Chundra, we come on a blank wall which hides everything behind it. We enter the gate and find ourselves on the first floor of one of the mission premises. From the north and east, and from the heights on the west, the mission buildings, so thoroughly in European style, with sloping slated roofs and gables, appear quite a picture in a scene lonely without it. From the south, hidden by the entire village, there is no view of it. In a quadrangle there are four ranges of buildings—those to the south and west being double-storied, the abodes of the brethren, with the printing department and lodgings for a few fair Thibetan ladies; and those to the north and east being single-storied ranges of out-offices, one room of which was once the school-house. The loveliest flower-garden we have ever met with in the East, whether as regards the artistic taste with which it is laid out, or the choice and rare combinations of plants, many of which are unknown in the plains of India, occupies half of the court of the quadrangle, the other half on a lower terrace being a sheepfold and firewood range. To the north, outside of the buildings, is a well-stocked vegetable garden. There are few domestic servants, most of the household labour being performed by the members themselves. They are printers, carpenters, tailors, bakers and gardeners, all by turns. One or two Thibetans are retained for assisting and for the meaner drudgeries. And there are smiling European infant faces, growing up to intelligence and a perfect knowledge of the meaning and pronunciation of Thibetan words. When their fathers have done their work, we may expect these to take their place, and carry out their labours to a successful issue. The mission seems to be complete in itself in all respects, and presents the appearance of an exceedingly small and young but contented and vigorous colony. European supplies have to be brought all the way from Simla over the Rotung Pass, a distance of twenty marches. There is only the village dák system beyond the Pass, and in winter for five months this is necessarily discontinued. During winter all communications are entirely closed even with the next village, for heavy and impenetrable snow lies all around.

We have once before detailed the history of this settlement. The brethren in Prussia had started a mission for some Pagan tribes near the lower course of the Volga, and after some years of labour had begun to reap the fruits in a number of conversions, when the proverbial jealousy of the Greek Church was roused. It succeeded in procuring a mandate from the late Czar Nicholas ordering the Moravians to quit Russian territory. Baffled in the attempt to reach the tribes of Central Asia from the north, the brethren resolved to make an attempt by way of India. As a stepping stone to Thibet and Mongolia, nine years ago the mission at Kyelang was set on foot. Assisted by warm and generous-hearted friends, prominent among whom stood Colonel Lake and Dr. Cleghorn, the brethren succeeded in making themselves comfortable, and in commencing their work. To learn the Thibetan language was a considerable difficulty. The missionaries who began the work, Messrs. Heydé, Jaeschke, and Pagell, are yet barely able to talk fluently. Mr. Jaeschke has set himself to the written literature, Messrs. Pagell and Heydé take more to itinerations, and the whole country between Simla on the south and Ladak on the north, including Bussahir, Koonawur, Koolloo and Spiti, has for the past few years had the benefit of their ministrations. The small fairs and festivals now and then held in parts of the interior have constantly attended. Mr. Jaeschke having translated the Gospel according to St. Matthew, a small printing press with Thibetan founts was added to the mission. Copies have been largely distributed among the Lamas and other respectable Thibetans. The work, however, as may be imagined, progresses but slowly. There is the first and great difficulty of the language to be got over. The second is that the Lama Goorous, as they are called, hold complete sway over the few rude villagers and mountaineers. Another is the extreme sparseness of the population. A fourth is that the working season from winter to winter is so short, and so much time is constantly occupied in merely getting over the ground, that there is but little left for sustained and profitable labour.

We are inclined to believe, moreover, that the locality was not well chosen. This is gradually being acknowledged, and Mr. Jaeschke has been authorized to judge if Dargeeling would prove a better spot. He has accordingly proceeded there, and in the event of his approval of the place, a branch will be opened there in connection with the Labool Mission, which is not to be abandoned. At the same time, the older Mission has been strengthened by the arrival from the Cape of the Rev. Mr. Reichler, and his wife. Messrs. Heydé and Pagell once made an attempt to penetrate into Tartary by way of Rudok, in the disguise of Lamas, but failed to go beyond the Maharaja of Cashmere's territories in little Thibet. They also failed in an attempt to open a Mission at Ladak, the Maharaja courteously according them permission to visit the city in summer, but practically refusing them by telling them they could never stand out the winter there. The Mission has not yet secured one convert, but there are two intelligent and respectable enquirers attached at present to it. When these are baptized, more fruits may be expected to appear. The members of the Mission are generally held in respect by the rude mountaineers, who are glad when the "Padre Sahib" is among them.

Such is a brief account of one of the most earnest and devoted Missions of the country. Its agents labour far away among bleak and snowy mountains, seeking no earthly reward, without any public lists of subscriptions to aid them in their extraordinary expenses in such an unenviable position, and working to the end of their lives without hired remuneration.

The Fall of Richmond, and its Effect upon English Commerce.

(Economist.)

The fall of Richmond is one of the most striking events of modern history. On the one side the great hopes of the Confederates, their equally great efforts, the sympathy they have gained in Europe: on the other side, the undaunted courage of the Federals, their refusal to admit, even to their imagination, the possibility of real failure, their accumulating power, which for many weeks past has seemed to concentrate like a gathering cloud about the capital of their enemies, give to the real event the intense but melancholy interest that belongs to the catastrophe of a tragedy. It is impossible not to feel a sympathy with the Confederates. There is an attraction in vanquished gallantry which appeals to the good side of human nature. But every Englishman at least will feel a kind of personal sympathy with the victory of the Federals. They have won, as an Englishman would have won, by obstinacy. They would not admit the possibility of real defeat; they did not know that they were beaten; or, to speak more accurately, they knew that though they seemed to be beaten they were not: they felt that they had in them latent elements of conclusive vigour which, in the end, they should bring out, though they were awkward and slow in so doing. We may alter perhaps, in a little event, the terms which, in one of the greatest specimens of English narrative, the great English historian describes on a memorable occasion the conduct of Rome. "But there are "moments when rashness is wisdom, and it may "be that this was one of them, panic did not for a "moment unnerve the iron courage of the Ameri-"can democracy, and their resolute will striv-"ing beyond its present power created, as is the law "of our nature, the power which it required."

But leaving history to deal in a becoming manner with the imaginative aspect of this great event, let us look at its present aspect in a business-like manner. The details of it are yet uncertain, and any conclusive judgment on minute results would be absurd. But, as far as we know, what does it amount to, and what will be its result?

It used to be said that Richmond was not essential to the Confederacy; that it was a nominal and accidental capital; that it was not even the original capital; that Virginia was but an outside State in a Confederacy with a vast interior; that even if this superficial outwork was lost, the war could be indefinitely protracted; that the fall of this exterior fortification would have scarcely affected the resistance of the provinces, upon which everything depended. And at the outset of the war, when these words were used, they were doubtless substantially true. Subsequent events have in many respects confirmed them, and have in few tended to contradict them.

But now the case is altered. The loss of an outer fortification does not impair the resisting faculty, when it is lost early in the day—when its defenders have not spent upon it the resources which are needful to defend the citadel. It still appears to be true, that if some time since, when the confederacy had three armies unbroken—when no hostile army had penetrated their interior—when their organisation was as yet intact, its Government had retired from Richmond, the war would not have ceased on evacuation. The task of pursuing three armies retiring in a vast and friendly country by continuous marches would certainly have been difficult, and might not have been successful. Loose bodies of insurgents, if such there were, would then have had large armies upon which to support their accessory operations. But now the Confederacy have no such armies. What Lee may have saved, what Johnston may still contain, we do not know; but we may say with tolerable certainty that they are inexhaustibly less than the armies of the Confederacy a year ago, that they cannot maintain as compact bodies even a defensive and retiring conflict with the eager armies of the North.

But without organised armies, can the Confederates be defended by loose insurgents and guerilla warfare, acting alone and without support? We believe that history affords no countenance to such an idea. A guerilla warfare requires the aid either of disciplined forces or of inaccessible territory. The history of the Spanish war shows conclusively that the guerilla resistance of the nation would have been useless without the regular resistance of the English army under the Duke of Wellington; the Spaniards enabled him to effect more with fewer troops, but they did little themselves. A territory like Arabia, a mountain chain like the Caucasus, can be defended by a few bodies of men with little discipline as well as by many more with discipline. Nature does so much that *any* sort of human force is sufficient to complete it. But the territory of the Confederacy though vast is penetrable: it is not a fortress, it is only a battle-field: it is a country in which a martial population, aided by effective armies, may well resist an invading enemy; but it is also a country from which even the most martial population may be brushed off with ease by diffused and disciplined forces.

Even under the most favourable circumstances a guerilla warfare by a nation of slave owners must have unusual difficulties. The slaves cannot be relied on as a native peasantry can be relied on throughout. When Sherman on his march through Georgia always had good information regularly brought by negroes. We do not vouch for this fact; but it illustrates our meaning as an example. It is impossible that the existence of a slave class, which is not a part of the nation, which requires to be kept down by the nation, should not always be an impediment to the rising of the nation, and especially so in this case, when the invading army proclaims liberty to those slaves. We cannot expect a protracted guerilla resistance from a nation which has neither an inaccessible territory, nor a regular army, nor an attached peasant population.

But if the Confederacy cannot long defend itself, if the civil war must come to an end, what will be its effect on us? The war itself disturbed us much in its origin and much by its continuance, will it also disturb us by its cessation?

It is undeniable that the fall of Richmond, such as we have ascertained it to be, would have been of disastrous consequences to several branches of English commerce if it had happened six months ago. When cotton and its substitutes were weakly held at extravagant prices, the sudden occurrence of so great a catastrophe must have caused of itself many failures. So many slow and steady agencies all tending to produce a fall of price were then operating, that the addition of a single one of a striking nature might have produced lamentable results. A great panic in one class of articles would in a sensitive state of the commercial world have produced a semi-panic in other articles. But *now* the case is different. Prices have greatly fallen. Whether they may have reached their lowest point exactly may be argued, but they have fallen so low that no great further drop is possible or likely. Many weak holders have been cleared away, and the nominal price in consequence is firmer and more real than the nominal price of six months since. The peculiar circumstances affecting cotton, we explained in an elaborate article last week. We showed that even on the assumption that "the civil war in America must be near its close," there was no ground for thinking that cotton would experience a further fall, but rather a probability that the present fall had been too great and too sudden to be permanent. In fact, as so often happens, the effect of the defeat of the South has been *discounted*; the result of the expectation has been so great, if not greater than the result of the event.

There is another circumstance of great importance. The world is getting "short of clothes," and especially of good clothes. When the war broke out, great stores of cotton goods were found to be lying in warehouses at Manchester and elsewhere, and many persons were eager to raise the common cry of over-production; they fancied there was something anomalous and out of place in so vast an accumulation. But Mr. Cobden, with that rapid perception of the facts of commerce which characterised his mind, immediately said, "No, there is no unnecessary accumulation, except in one or two particular markets, as India and China, and in other exceptional cases: we have not more goods on hand than we ought to have." In reality, a considerable accumulation of stored manufactures is an attendant condition, an inevitable consequence, of the present vast and delicate division of labour. When everybody is working for everybody, everybody is injured by the mischances of everybody. An English middle class consumer is fed and clothed by an immense multiplicity of labourers; their numbers are considerable, and they are of several kinds. If any one important species of these labourers is impeded, we risk the loss of some article of prime necessity. But we *insure* against it. We keep a stock of each durable article so considerable that we have much to last for a long time, even if the means of producing it have by some casualty suddenly stopped. Some people say the world ought always to have "two years' stock" of clothes on hand, and now we have nothing like it.

The effect of this will be very remarkable. When the American war broke out we *had* two years' stock on hand, and we lived on that till other sources of supply were opened and made effectual. The existence of that supply *insured* us them; its *non*-existence will insure us now. As we return to a usual and normal state of things, we shall tend to recur to our regular and habitual accumulation. We have not only now to clothe the world—we have to clothe it and something more. We have to make up our stock; to again create the guarantee fund, which shall insure us against by now calamities—against some deprivation of supply as sudden and unlikely as an American civil war would have seemed five years ago. At that time any one who had prophesied the actual history of those five years would have been deemed a lunatic: our stored resources saved us then, and we must store them up again now to use them in like manner.

And this additional demand will gradually carry off an additional supply—especially if, as is likely, the clothes made with cheap material be better than the clothes made with dear material. There will be a capital demand for cotton and other goods, if once it is understood that the end is attained, that the bottom is reached, that the trader nearest the consumer—the small shopkeeper—had better supply himself at once. The stores of the world are now only half supplied; if they once take to supplying themselves, the demand will be great.

As far, therefore, as the producing power of America is concerned, we do not think its revival, even if it should occur very rapidly, would derange our market, or effect us except beneficially. Nor, as far as its consuming power is concerned, can we expect much from the conclusion of the war. Some sanguine persons fancy that we shall at once have a vast trade with the United States the moment they are reunited—the moment the war stops. But there is no ground for so thinking either as respects the South or the North. *Some* addition at trade with both, of course, there will be, but not enough to affect Lombard street—to alter the demand for the *capital* of England. First, as to the North, its tariff cripples to an incredible extent all commerce with it. It has been spending largely and recklessly. It has been borrowing largely and recklessly. It has been misusing its currency. The repentance after these errors will be a time of *strait* and difficulty, and though under good management its splendid national resources are quite sufficient to cope with this difficulty, yet the difficulty is real and considerable. The *additional* burden of taxes which we shall have the North will not be of the first magnitude—will not effect the money market.

Nor will the trade with the South. The South is disorganised, and must long be disorganised. What the fate of its peculiar civilisation may be we cannot yet say, for there are no data, and any conclusion is only "one guess against many." Our notion is little better perhaps than others, but without any solid ground of evidence. But so much is evident, that great changes are in store for the South,—that it must pass through a social revolution—that during the revolution it will not buy as it used to buy,—that after the revolution tastes will have changed, and it will not buy what it used to buy.

On the whole, therefore, the conclusion is, that though the catastrophe of the American war seems likely to happen more suddenly and more strikingly than could have been expected, yet its principal effect will have been already anticipated, and it will have less influence on prices and transactions than many events of less considerable magnitude.

MORE CURES OF CONSUMPTIONS' COUGHS, ASTHMA, AND DISEASES OF THE CHEST AND LUNGS,
BY
DR. LOCOCK'S PULMONIC WAFERS.

EXTRACT of a letter from Mr. C. Ward, stationer, &c., Market-place, Heckmondwike, Yorkshire, May 27th, 1863.—"The cures of consumption, asthma, and other diseases of the chest and lungs, are regularly occurring. One person in Liversedge, a village adjoining this town, named James Richardson, who has been an asthmatical man for nearly twenty years, declares that they are worth £1 a box (using his own words). He feels quite a new man through this truly valuable medicine." Dr. Locock's Pulmonic Wafers give instant relief of asthma, consumption, coughs, colds, and all disorders of the breast and lungs. To singers and public speakers they are invaluable; they have a pleasant taste. Price 1s. 1½d. 2s. 9d., and 11s. per box. Sold by all druggists.
